

\* Bibliographic management tools have been widely used by researchers to store, organize, and manage their references for research papers, theses, dissertations, journal articles, and other publications.

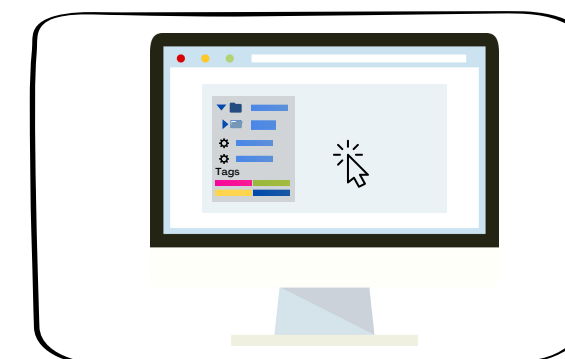

ZOTERO

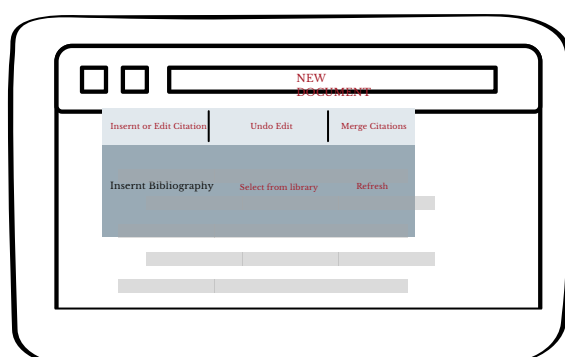

\* Zotero is a free and open source bibliographic manager developed by George Mason University in 2006.

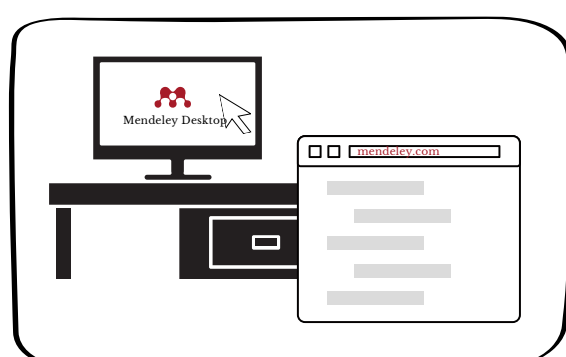

\* Zotero can easily capture a web page, a journal article or a list of references from an online database, a piece of news from a newspaper, or a book record from an online catalog.

\* Users can create folders to organize their references by subject, format, sources, or any other types. They can cite references easily by dragging and dropping references directly from a Zotero collection into a paper.

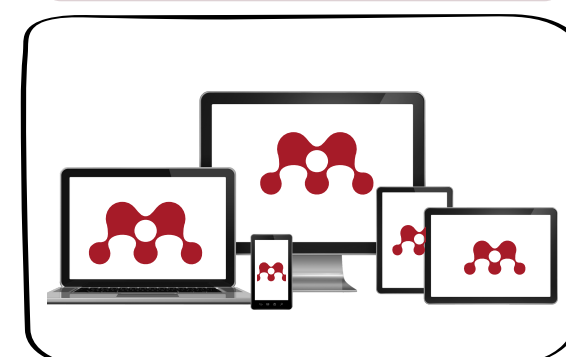

\* Mendeley makes it easy for users to manage and annotate their paper collections, mostly PDF files, to collaborate with colleagues in their research work, and to discover relevant papers and statistics in their research field.

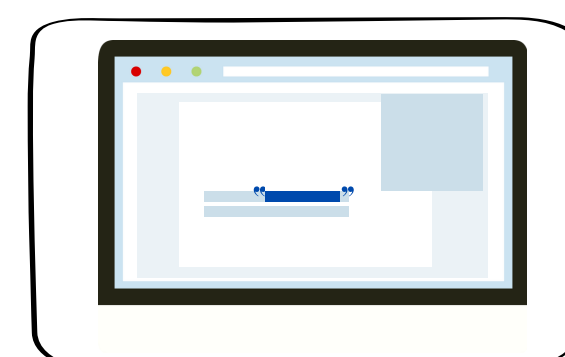

\* It has two components: Mendeley Desktop application and Mendeley Web interface.

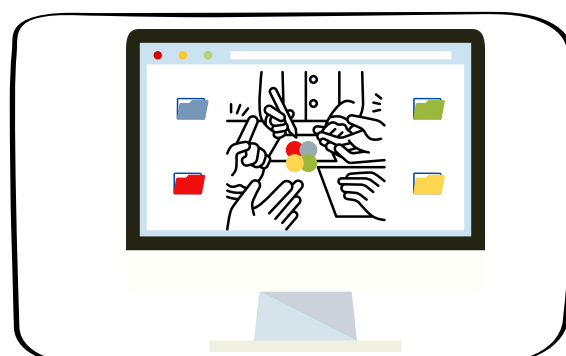

MENDELEY DESKTOP/MENDELEY WEB

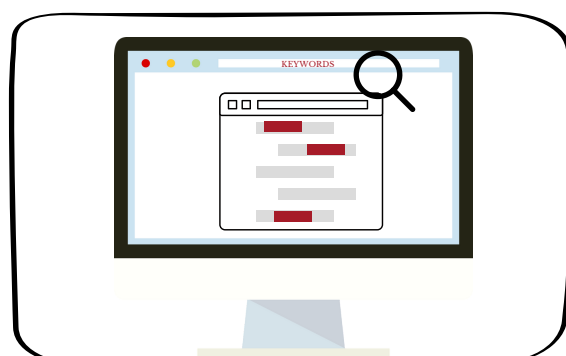

\* Mendeley, launched in 2008, is a free bibliographic reference management tool as well as an academic social network for researchers and scientists.

\* With Zotero plug-ins installed in the word processor, users are able to insert citations or footnotes from a Zotero collection into their manuscript. They can cite references easily by dragging and dropping references directly from a Zotero collection into a paper.

\* Researchers can share references by using groups to join other groups or create their own and invite collaborators.

\* Users can also search for any keywords in the full text of the articles, making it very convenient for users to locate their desired information.

\* Mendeley is a great tool to collect and store articles in PDF.

\* Researchers can use Mendeley Desktop to organize their references, store their collected papers, annotate and highlight them in the PDF viewer, share their research with others in the groups they joined, and cite references in a word processor.
